Overview

PXle-3911 is a remote control module based on the thunderbolt 3 technology of Intel thunderbolt bus. The module in PXle chassis can be controlled by the thunderbolt interface.

PXle-3911 provides two thunderbolt 3 ports, each of which can provide one-way 40Gbps bandwidth, and supports daisy-chain function. Engineers can use the second thunderbolt port to connect additional thunderbolt devices or USB type-C devices, and support Hot-Plug function.

Structure Chart

Note:

1. PXle-3911 does not support PXI cards in PXle-62590 and PXle-62780 chassis, only PXle cards can be supported, because the two chassis use Pericom PCIe-to-PCI chip and thunderbolt chip have compatibility problems.
2. PXle-3911 does not support DSA PXI-69527 and PXle-69529 cards. The main reason is that DSA driver does not support Hot-Plug function.
3. PXle-3911 has a maximum write speed of 1.81 GB/s and a read speed of 2.69 GB/s.
